PROFESSIONAL SUMMARY

Java Backend Engineer with 3+ years of experience designing, developing, and maintaining production-grade backend systems using Java, Spring Boot, REST APIs, and Microservices. Experienced in building and securing 100+ REST endpoints across 10+ services using Spring Security, JWT, and RBAC. Hands-on experience with MySQL, PostgreSQL, MongoDB, Redis, Hibernate/JPA, payment gateway integrations, database optimization, caching, transactions, and concurrent systems.

TECHNICAL SKILLS

Languages: Java 8/11/17, SQL

Core Java: OOP, Collections, Generics, Multithreading, Exception Handling, Streams

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring AOP, Hibernate

Backend & Architecture: Microservices, REST API Design, Layered Architecture, SOLID Principles

Databases & Performance: MySQL, PostgreSQL, MongoDB, Redis, Query Optimization, Indexing, Schema Design, Transaction Management

Security: JWT, OAuth 2.0, Role-Based Access Control (RBAC), Authentication & Authorization

Tools & DevOps: Git, GitHub, Maven, Docker, Postman, Swagger/OpenAPI, IntelliJ IDEA, Linux, Agile/Scrum

Testing: JUnit 5, Mockito

Messaging & Cloud: Apache Kafka, AWS, Oracle Cloud, CI/CD

PROFESSIONAL EXPERIENCE

Backend Development Engineer

Dec 2024 – Present

Togethring Media Labs

Pune, India

- Designed and delivered 10+ Spring Boot microservices in production, defining service boundaries and REST contracts while decomposing monolithic functionality into independently deployable services.
- Built and secured 100+ REST endpoints using JWT authentication and role-based authorization with Spring Security, standardizing authentication and authorization across services.
- Integrated payment gateway flows handling 100+ monthly transactions, implementing idempotency keys and webhook reconciliation to prevent duplicate charges and payment mismatches.
- Optimized Hibernate/JPA queries and MySQL schemas by resolving N+1 query issues, adding composite indexes, and introducing Redis caching for frequently accessed data.
- Developed backend services for an analytics platform, aggregating event data and exposing reporting APIs consumed by internal dashboards for business decision-making.
- Developed Wix plugin services and CRM integration layers for third-party data synchronization, handling backend workflows between external platforms and internal services.

Java Backend Developer

Jun 2023 – Sep 2024

Heliverse Technologies

Gurugram, India

- Developed Spring Boot REST APIs for a Customer Management System serving 500+ active users, following layered architecture and SOLID principles.
- Engineered a real-time property bidding system handling concurrent bids using database transactions and locking strategies to maintain data consistency under simultaneous access.
- Implemented payment gateway integrations and role-based access control across core modules, securing customer and transaction data.
- Collaborated with frontend, QA, and product teams in Agile sprints to translate requirements into maintainable backend solutions.

PROJECTS

TradeDrift — Trading Journal & Backtesting Platform

tradedrift.in

Backend Engineer | Personal Project

- Designed a deterministic analytics engine computing win rate, expectancy, profit factor, and drawdown from reconciled trade data, providing structured metrics for downstream AI-powered analysis.
- Built the trade-ingestion and reconciliation pipeline handling CSV imports and broker synchronization, rebuilding raw fills into trades with fees and funding costs.
- Implemented multi-tenant data isolation, JWT-based authentication, and subscription billing across four pricing tiers on a live, publicly launched product.

EDUCATION & TRAINING

Bachelor of Computer Applications (BCA) – Manipal University Jaipur

Backend Development Program – Masai School
